

LAB 10: Global Counter Using useContext _ANP-D1840

Build a global counter using **useContext** where:

- Component A → **Increase counter**
- Component B → **Decrease counter**
- Component C → **Show counter**

Question 1 — Create Context File

Create a new file named **CounterContext.js**.

Inside this file:

1. Import createContext from React
2. Create a context named **CounterContext**
3. Export it as default

✎ Write the code required to create and export a context.

Question 2 — Setup Context Provider in App.js

In App.js, perform the following tasks:

1. Import useState and CounterContext
2. Create a state variable named **count** with an initial value of **0**
3. Create a function **increase()** → increases count by 1

4. Create a function **decrease()** → decreases count by 1 but **should never go below 0**
5. Wrap all components inside **CounterContext.Provider**
6. Pass the values { count, increase, decrease } to Provider

• Write the complete App.js code implementing these requirements.

Question 3 — Create IncreaseCounter Component

In IncreaseCounter.js:

1. Import useContext
2. Import CounterContext
3. Access the **increase** function from context
4. Create a button labeled **Increase** that calls the increase function when clicked

• Provide the code for this component.

Question 4 — Create DecreaseCounter Component

In DecreaseCounter.js:

1. Import useContext
2. Import CounterContext
3. Access the **decrease** function from context
4. Create a button labeled **Decrease** to decrease the count

• Write the code for this component.

Question 5 — Create DisplayCounter Component

In DisplayCounter.js:

1. Import useContext
2. Import CounterContext
3. Access the **count** value from context
4. Display the count inside an <h2> element with text:
“Current Count: X”

✎ Write the code for this component.

Question 6 — Final Output Check

After completing all components:

✓ The app must show:

- Increase button
- Decrease button
- Current Count display

✓ The counter should:

- Increase when clicking Increase
- Decrease when clicking Decrease
- Never go below 0

✎ Run and test your application.
