

## Lab 8: Build a Dynamic & Reusable CourseCard Component — ANP\_D1840

Create a reusable React component named **CourseCard** that displays course details using **props**.

Then, use this component **five times** with different course data.

### Task 1: Create a New Component

**1. Inside the src folder, create a new folder named:**

components

**2. Inside components, create a file:**

CourseCard.jsx

**3. Inside CourseCard.jsx, create a functional component that accepts the following props:**

- courseName
- duration
- trainer
- fee
- mode

### Task 2: Display Props in UI

Inside the component, display the passed props in a clear UI layout.

**Example Layout (students must follow):**

Course Name: \_\_\_\_\_

Duration: \_\_\_\_\_

Trainer: \_\_\_\_\_

Fee: \_\_\_\_\_

Mode: \_\_\_\_\_

✓ Must use **JSX**

✓ Must use **props**

✓ Must wrap content inside a `<div>`

### **Task 3: Use the Component 5 Times**

In **App.js**:

- Import the CourseCard component
- Create **5 different course entries**
- Pass values through props

**Example values to vary:**

- Course Name: React, Power BI, SQL, Excel, JavaScript
- Duration: 1 month, 2 months, 3 months
- Trainer: Kumar, Kavın, Anitha, Manoj, Akash
- Fee: 8000, 10000, 12000, 15000, 20000
- Mode: Online / Offline
