SUMMARY

Full stack developer with a strong foundation in Java and hands-on experience building REST APIs, relational data models, and component-driven frontends. Comfortable across the Java full stack — Spring Boot for backend services, Angular for responsive UIs, and MySQL for data design — alongside practical experience in JWT authentication, API integration, and cloud deployment gained through production internship work. Adaptable and quick to learn new technologies, having shipped end-to-end applications independently from database design through deployment.

EDUCATION

Vellore Institute of Technology | Vellore
MTech Integrated Software Engineering

2024
GPA: 7.64/10.00

EXPERIENCE

Project Associate – BFSI Operations | *iSolve Technologies* | Present

- Supported BFSI workflows through structured data handling, document validation, and process execution
- Ensured data accuracy and compliance in high-volume operations, strengthening attention to detail applicable to data modeling and validation

Developer Intern | *Wezigns*

Sept 2024 – Aug 2025

- Developed and **maintained** responsive client websites using WordPress, Astra, Elementor, HTML, CSS, and JavaScript, based on business requirements.
- Managed e-commerce functionality using WooCommerce and handled website content, products, categories, pricing, inventory, forms, and customer-facing pages.
- Developed responsive React-based interfaces with component state, routing, and API integration; integrated payment gateway APIs and supported deployments using Firebase, Vercel, and Netlify.
- Enhanced UI/UX, performed functional and responsive testing, and troubleshooted authentication, CORS, and functionality issues across live client websites.

PROJECTS

Employee Management System — Java | Spring Boot | Angular | MySQL | REST API

- Developed a full-stack CRUD application for managing employee records, departments, and roles using Spring Boot, Spring Data JPA, and MySQL.
- Implemented RESTful APIs using a layered Controller–Service–Repository architecture with input validation and centralized exception handling using `@ControllerAdvice`.
- Developed the Angular frontend with reactive forms, routing, and HttpClient-based API integration to provide a responsive administrative interface.

Event Registration & Management System — Java | Spring Boot | Angular | MySQL | JWT

- Re-engineered an existing event registration platform using Java and Spring Boot, modeling events, users, and registrations as normalized relational entities in MySQL.
- Implemented JWT-based authentication and role-based access control using Spring Security.
- Replaced the existing Firebase data layer with Spring Boot REST APIs and integrated them with the Angular frontend using RxJS Observables.

Task Management System — Java | Spring Boot | Angular | MySQL

- Developed a task tracking application with relational entity mappings, pagination, and Spring Data JPA derived and custom queries for search and filtering.
- Implemented Angular services and route guards to manage authenticated views and role-based dashboards.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL

Backend: Spring Boot, Spring MVC, Spring Data JPA, Spring Security (JWT), REST APIs

Frontend: Angular, React, HTML, CSS, Bootstrap, Tailwind, ShadCN/UI

Database: MySQL, MongoDB

Tools: Git, GitHub, Postman, Visual Studio, Figma, Vercel

Other: Collaboration, Problem Solving, Adaptability, Communication, Process Compliance

CERTIFICATIONS

Front-end Development – [Meta](#) | MySQL – [Simplilearn](#) | UI/UX Design – [Udemy](#)
